TrichoLAB
Trichoscopy Report

Name:	Surname:	Personal ID:	Date:
Tom	Test	12345678901	17/03/2015

Frontal Area

Temporal Area
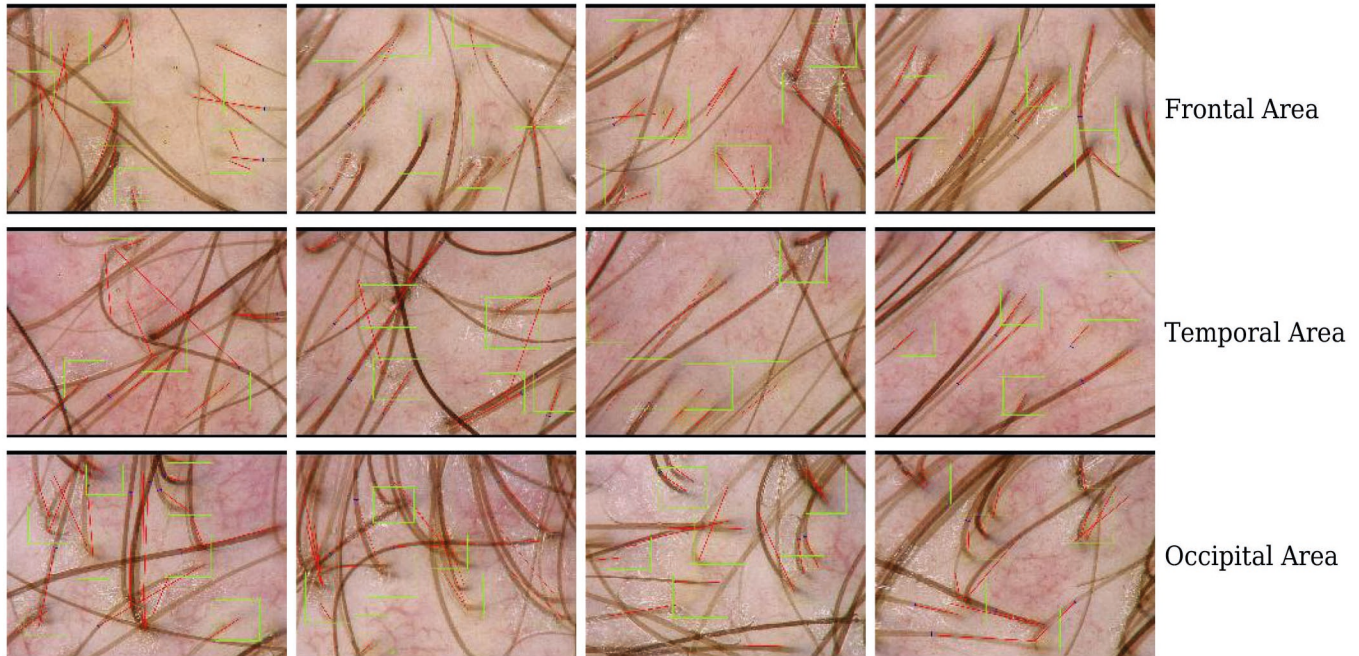

Occipital Area

Statistics:

	Frontal Area	Temporal Area	Occipital Area
Average number of hairs [N/cm2]	203	146	197
Average hair shaft thickness [µm]	60	60	65
Thin (≤ 30 µm) hairs [%]	6	4	0
Mid (30-50 µm) hairs [%]	26	15	8
Thick (≥ 50 µm) hairs [%]	69	81	92
Single follicular units [%]	26	27	7
Double follicular units [%]	46	45	38
Triple and bigger follicular units [%]	29	23	48
Empty hair follicles/yellow dots [N/cm2]	24	9	0

Conclusions:
Features of early androgenetic alopecia: increased number of empty hair follicles and increased number of single-hair units in the frontal area, average hair shaft thickness in the frontal area lower than average hair shaft thickness in the occipital area. Marked hair diameter diversity in the frontal area.
